# *Clapeyron*

tokensale  
v1.0(en)

[This paper may not be actual \(25.10.17\). New version is coming soon](#)

Hello! We are a team working on creation of a multifunctional mobile assistant robot for home use. This brochure is designed to help you become familiar with the basic information about our ICO and the token sales policy.

4. Buyback	5
4.1 Highlights	5
4.2 PCLP buyback	7
4.3 CLP buyback	8
5. Bounty	9

# 1. Why ICO

During the ICO a certain number of tokens is issued, which are sold to the investors.

Token is a cryptocurrency coin issued in the blockchain of Ethereum. You can buy a token with the ETH (Ethereum) cryptocurrency. Perhaps, at the main stage of the ICO, we will hold a multicurrency ICO (when the token is issued to your address in Ethereum blockchain, but you can buy it not only for Ethereum). The purchased token will be attached to your address by a smart contract.

The advantages of the ICO are:

- The openness of the blockchain - you can see any transaction within the network.
- Smart contracts that provides rules for collecting funds for the ICO. It cannot be changed after the start of the ICO.
- You can trade tokens on the stock exchange after the company will release them to the market and begin the process of buying tokens back.

Conducting an ICO will allow us not to sell out a large share of the company. An additional reason in favor of fundraising using ICO are our plans about organizing a cloud learning service, where data will be collected using blockchain technology. The source code of this solution will be in the public domain.

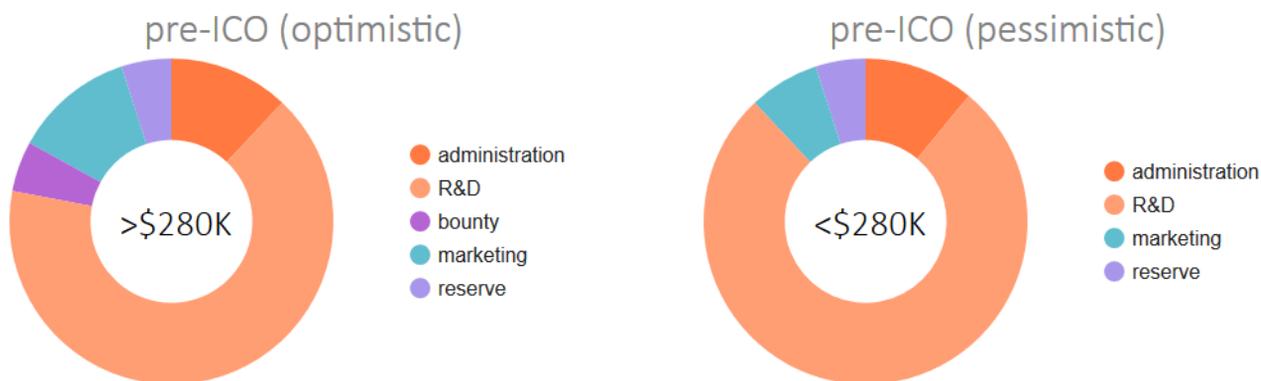

## 2. Pre-ICO stage

Token name	PCLP (preClapeyronToken)		
pre-ICO start date			
pre-ICO deadline			
	\$	ETH	CLP
Maximum amount	400 000		400 000
Minimum amount	250 000		250 000

PCLP token price during pre-ICO:

Days	Price of 1 PCLP (\$)	Price of 1 PCLP (ETH)
1 - 14	1	*

Spending the funds raised during the pre-ICO:

\* Hereinafter, the specified dollar amount is converted to ETHs based on the current exchange rate at the moment of the ICO start. Thus, the token is attached to the ETH during the ICO

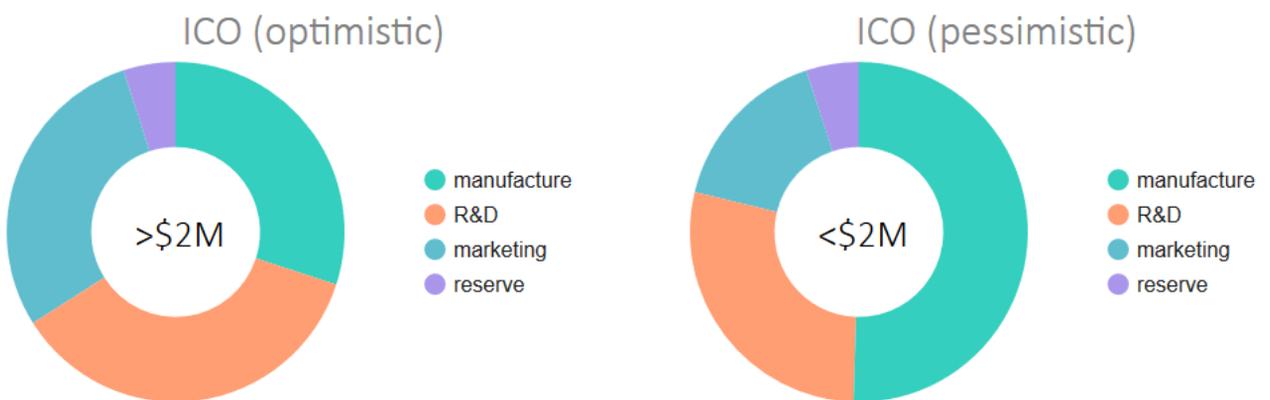

# 3. ICO stage

Token name	CLP (ClapeyronToken)		
ICO start date			
ICO deadline			
	\$	ETH	CLP
Minimum amount	10 000 000	-	~15 200 000
Maximum amount	-	-	-

The CLP token price dynamics during the ICO:

Day	Time	Price of 1 CLP (\$)	Price of 1 CLP (ETH)
1	0:00	0.64	
1	23:59		
2	0:00	0.66	
2	23:59		
3	0:00	0.68	
3	23:59		
4	0:00	0.70	
4	23:59		
5	0:00	0.72	
5	23:59		
6	0:00	0.74	
14	23:59		

Spending the funds raised during the ICO:

# 4. Buyback

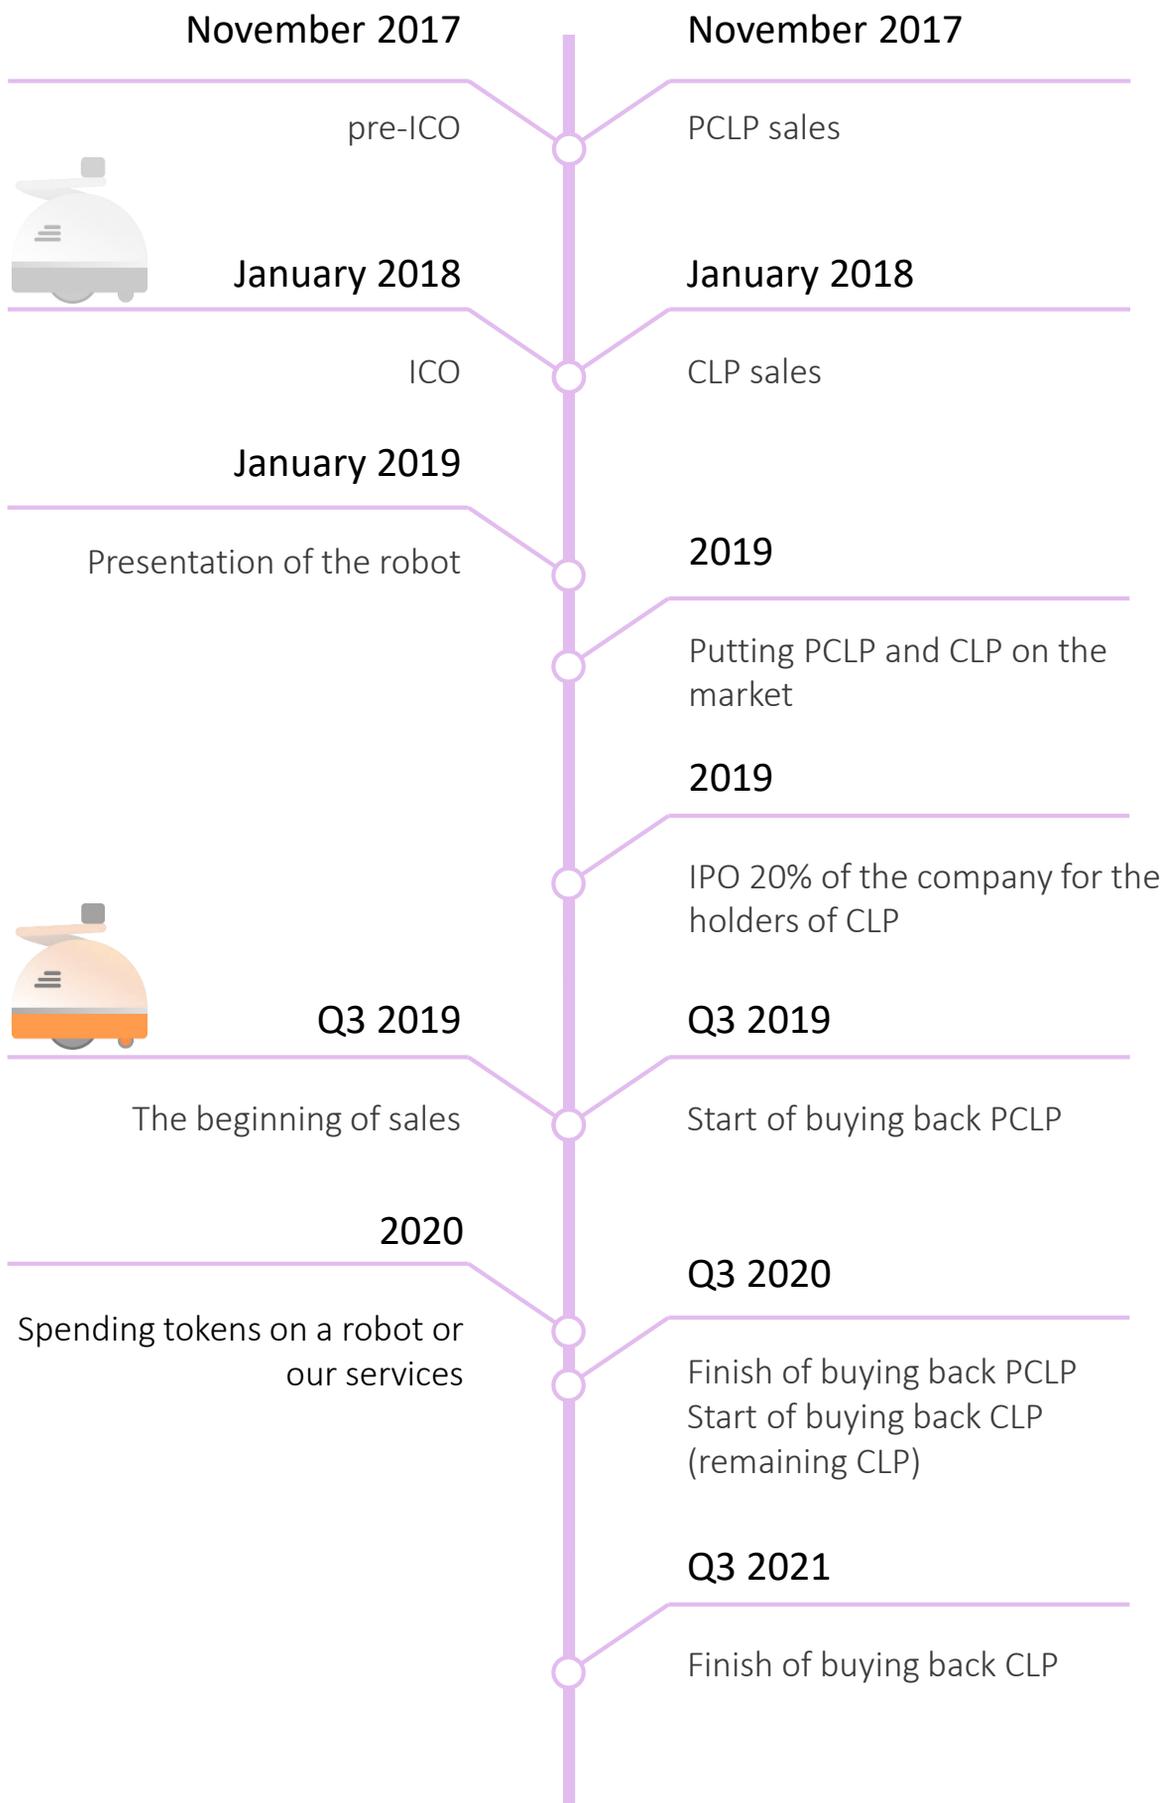

## 4.1 Highlight

The ICO will be carried out in two rounds: pre-ICO and ICO, where PCLP and CLP tokens will be sold, respectively. These tokens are different, so each has its own buyback scenario.

We assume that the option with the x16 profit will be in the greatest demand for PCLP tokens (pre-sales), and for CLP tokens (main round) the most lucrative option will be getting Clapeyron shares. In case you don't want to exchange CLP for shares, you can get 230% of the invested amount.

A year after the fundraising, Clapeyron will present the robot, announce the sales starting date and open the pre-order for customers, and in three quarters, the sales of robots will begin. In between these events, PCLP and CLP tokens will be presented on the stock market (PCLP and CLP tokens supports the generally accepted ERC20 standard), and 20% of the Clapeyron company will be sold on the IPO to the CLP tokens owners. Tokens buyback will begin after the robot sales start.

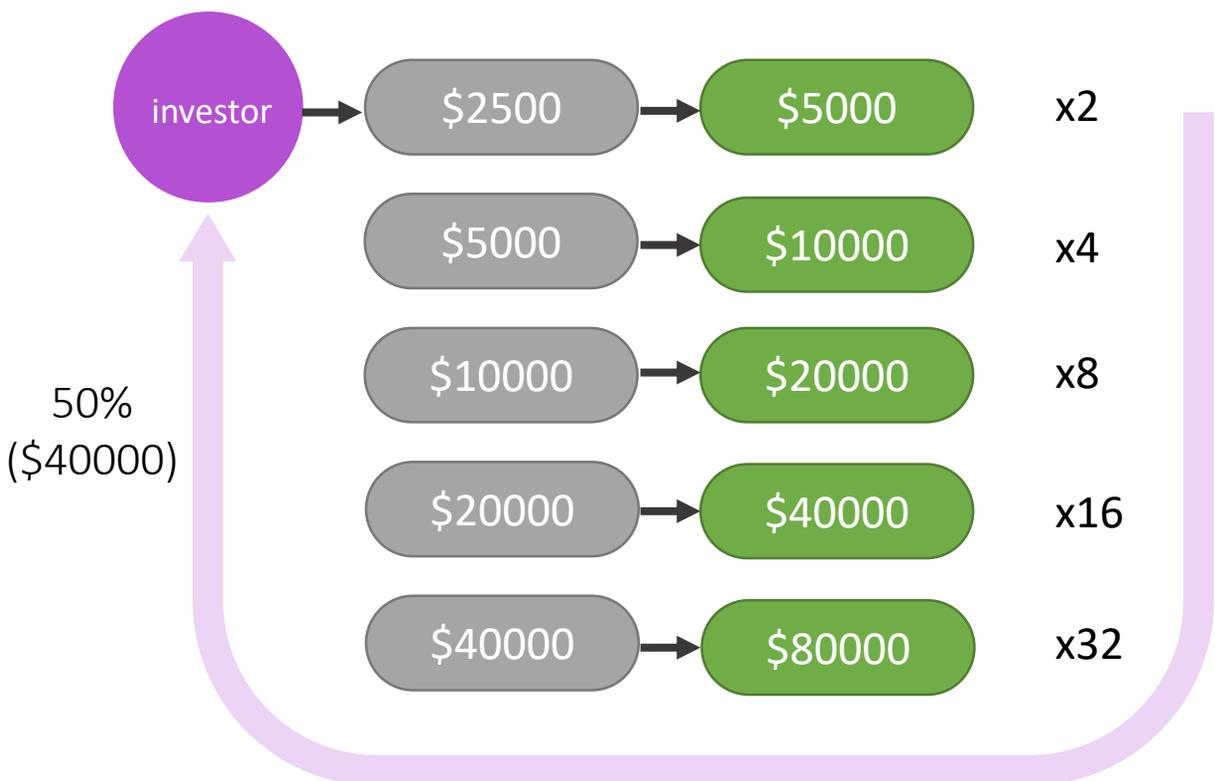

Note that in the future you will be able to spend your tokens on a robot or our services.

## 4.2 PCLP buyback

For every 2500 raised a robot will be assembled and then sold for 5000. Than for 5000 gained two robots will be assembled which will be sold for 10000 and so on. There will be 5 of such rounds. In each round an investor can take 50% of the earnings. In case that an investor goes through all the 5 stages, his profit will be 50% of the initial investment x 32 (i.e x16)

The buyback of all PCLP tokens will be realized within the first year of the robot sales. For PCLP buyback a special contract will be created on which the buffer balance for the repurchase will be accrued. The buyback price will correspond to the current stage of the cycle. The PCLP buyback will be possible during one of the rounds.

## 4.3 CLP buyback

For each CLP token, a buyback for \$ 1.5. is provided. CLP purchase is made in accordance with the prices schedule (from 0.64 to 0.74 for 1 CLP)

Thus, the investor will receive from 205% to 230% of the amount invested in ICO (in case of refusal of a company share distributed on the IPO).

We assume that a CLP buyback for 205-230% of the invested amount will be possible during the year after a buyback of all PCLPs. For CLP buyback a special contract will be created on which the buffer balance for the repurchase will be accrued.

The contract will take into account the order of the purchase of the CLP, since the purchase of the CLP will be made gradually.

Also, holders of CLP tokens will be able to participate in IPO, where 20% of the company Clapeyron will be distributed between investors in proportion to the number of tokens.

# 5. Bounty

There is a reward for the participation in the bounty program. It will be distributed immediately after the pre-ICO and immediately after the ICO.

If more than \$ 265,000 will be collected during the pre-ICO, the participants of the bounty program will be able to choose how to get their reward: in PCLP tokens or in ether (equivalent to the pre-ICO pricing). Dollar equivalent of the total award will not exceed 5% of the amount collected.

If from \$ 250,000 to \$ 265,000 will be collected during the pre-ICO, 5% of the sold PCLP tokens will be issued and distributed among the participants of the bounty program.

A personal account is crucial for the bounty-program participants; it also can be used by the investors to track their investments. For bounty participants, the size of reward is proportional to the number of clicks on the participant's personal referral link. If the pre-ICO's minimal funding limit will not be reached, we will save your bounty progress (from your account) and this progress will be restored in the next trial of the pre-ICO. If no pre-ICO will take place, no reward will be given to the bounty-program participants.
